Why we are writing a monolith, Not a microservice

Supriya Srivatsa

Software Engineer, Atlassian

Microservice

Monolith

Why did we break down our monolith?

Okay, but why did we break down our monolith into… another monolith!?

Abstraction

Abstraction

We need abstraction. But it need not be over a network!

Boundaries

Boundaries

are hard to define.
Give space for the system to grow and evolve.

Conways Law

Conways Law

Should your codebases mimic your organisation structure?

So… you just broke down a monolith and built another monolith!?

Modular Monolith

Domain driven modules

Domain driven modules

Business domains drive modules.
Interactions between modules happen via well defined interfaces only.

Shape code structure

Shape code structure

Define boundaries, as we best know today.

Build for today,
Envision for tomorrow

That's why!

We are writing a modular monolith, Not a microservice
