Sully
@SullyOmarr

the @aisdk is probably the best way to build an ai app right now

you can go from idea → working ai app in 15 mins.

its made working with llms 10x more enjoyable (and we ship faster)

Max Baines
@maxbaines

Hands down the @aisdk is by far the best SDK I have worked with, thats pretty much all things since jQuery.

Micky
@rasmickyy

vercel ai sdk is just sooo good it hurts man...

Matt Pocock
@mattpocockuk

Vercel's AI SDK is one of the first tools I reach for when I'm building an AI-powered feature in TypeScript.

Kyle Mistele ✨
@Oxblacklight

Vercel's @aisdk is insanely good. Docs are fantastic. Great abstractions where you want them, doesn't force unnecessary ones, and lets you get under the hood where appropriate. Solves the hard stuff (stream parsing, tool streaming, multi-turn tool execution, error handling and healing/recovery) without forcing you into dumb patterns

It just works, it's fantastic software and delightful to use. The team ships insanely fast, and has turned PRs from me around in like 2 days, and frequently ships requested features in < 1w

With the ai thinking: "H automatic because th just a matte

Modern LLMs have a notion of function calling.

So, LLMs can call your JavaScript functions
...and React components are just functions

The AI Engineering revolution

AI used to be for the few (often with PhDs)

Now everybody who can call an API
can be an AI engineer

Software 1.0 → Software 2.0

Category	ML	AI
Language		
Stack	Backend-first	Frontend-first
Deployment	DIY	Models as a Service
Model size	Small	Large foundation models
Model DX	Training-first	Prompt-first, train later
What you ship	Research papers	Products
Time to market	Quarters/years	Days/weeks
Engineering TAM	1000s	>50M developers

Current Status: Using v0's DEV-1 in Cursor with the Chat SDK template to build a chatbot... that runs on DEV-1

This is the stuff I live for

CleanShot 2025-05-14 at 21.19.21@2x.png ▼

Thought for 5 seconds –

I'll update the buttons below the input with the SVG icons you've provided. Let me add these SVG files to your project and update the home page to use them.

Version 6	Latest	Viewing
public/layout-16.svg	Generated	
public/calculator-16.svg	Generated	
public/figma-16.svg	Generated	
public/camera-16.svg	Generated	
public/droplet-16.svg	Generated	
app/(main)/page.tsx	Edited	

I've updated the buttons below the input field on your home page with the custom SVG icons you provided. I added the SVG files to your public directory and modified the page.tsx file to use them instead of the Lucide icons.

The buttons now use:

- Camera icon for "Clone a Screenshot"
- Figma icon for "Import from Figma"
- Layout icon for "Landing Page"
- Droplet icon for "Sign Up Form"
- Calculator icon for "Calculate Factorial"

The icons look visually consistent and maintain the same size and style as before.

"AI is dissolving the boundaries between roles. We're seeing new product designers blend UX, UI, and code in one creative flow—thanks to tools like Vercel, v0, Uizard, and Cursor. Whether junior or senior leader, anyone can now build, test, and ship ideas independently—and that's not just efficient, it's liberating."

Nicolas Le Pallec
